

```
--display-used-exports    Display information about used exports in modules (boolean)
                          (Tree Shaking) (boolean)
--display-provided-exports Display information about exports provided from modules (boolean)
--display-error-details   Display details about errors (boolean)
--verbose                 Show more details (boolean)

Options:
  --help, -h      Show help (boolean)
  --version, -v   Show version number (boolean)
  --json, -j      Prints the result as JSON. (boolean)

Sues-Mac-Pro:webpacktest suethurburs webpack ./entry.js bundle.js --mode=bind 'css=style!css'
webpack 2.2.1
Usage: https://webpack.github.io/docs/cli.html
Usage without config file: webpack <entry> [<entry>] [<output>]
Usage with config file: webpack

Config options:
  --config Path to the config file (string) [default: webpack.config.js or webpackfile.js]
  --env      Environment passed to the config, when it is a function

Basic options:
  --context The root directory for resolving entry point and stats (string) [default: The current directory]
  --entry   The entry point (string)
  --watch, -w Watch the filesystem for changes (boolean)
  --debug   Switch loaders to debug mode (boolean)
  --devtool Enable devtool for better debugging experience (Example: --devtool eval-cheap-module-source-map) (string)
  -d        shortcut for --debug --devtool eval-cheap-module-source-map (boolean)
  -p        --output-pathinfo --define process.env.NODE_ENV="production" (boolean)
  --progress Print compilation progress in percentage (boolean)

Module options:
  --module-bind Bind an extension to a loader (string)
  --module-bind-post (string)
  --module-bind-pre (string)

Output options:
  --output-path The output path for compilation assets (string) [default: The current directory]
  --output-filename The output filename of the bundle (string) [default: [name].js]
  --output-chunk-filename The output filename for additional chunks (string) [default: filename with [id] instead of [name] or [id] prefixed]
  --output-source-map-filename The output filename for the SourceMap (string)
  --output-public-path The public path for the assets (string)
  --output-jsonp-function The name of the jsonp function used for chunk loading (string)
  --output-pathinfo Include a comment with the request for every dependency (require, import, etc.) (boolean)
  --output-library Expose the exports of the entry point as library (string)
  --output-library-target The type for exposing the exports of the entry point as library (string)

Advanced options:
  --records-input-path Path to the records file (reading) (string)
  --records-output-path Path to the records file (writing) (string)
  --records-path Path to the records file (string)
  --define Define any free var in the bundle (string)
  --target The targeted execution environment (string)
  --cache Enable in memory caching (boolean) [default: it's enabled by default when watching]
  --watch-stdin, --stdin Exit the process when stdin is closed (boolean)
  --watch-aggregate-timeout Timeout for gathering changes while watching (boolean)
  --watch-poll The polling interval for watching (also enable polling) (boolean)
  --hot Enables Hot Module Replacement (boolean)
  --prefetch Prefetch this request (Example: --prefetch ./file.js) (string)
  --provide Provide these modules as free vars in all modules (string)
  --labeled-modules (Example: --provide [Query]query) (string)
  --plugin Enables labeled modules (boolean)
  --bail Load this plugin (string)
  --abort Abort the compilation on first error (boolean)
  --profile Profile the compilation and include information in stats (boolean)

Resolving options:
  --resolve-alias Setup a module alias for resolving (Example: jquery-plugin-jquery.plugin) (string)
  --resolve-extensions Setup extensions that should be used to resolve modules (Example: --resolve-extensions .es6.js) (array)
  --resolve-loader-alias Setup a loader alias for resolving (string)

Optimizing options:
  --optimize-max-chunks Try to keep the chunk count below a limit (boolean)
  --optimize-min-chunk-size Try to keep the chunk size above a limit (boolean)
  --optimize-minimize Minimize javascript and switches loaders to minimizing (boolean)

Stats options:
  --color, --colors Enables/Disables colors on the console (boolean) [default: (supports-color)]
  --sort-modules-by Sorts the modules list by property in module (string)
  --sort-chunks-by Sorts the chunks list by property in chunk (string)
  --sort-assets-by Sorts the assets list by property in asset (string)
  --hide-modules Hides info about modules (boolean)
  --display-include Exclude modules in the output (string)
  --display-modules Display even excluded modules in the output (boolean)
  --display-max-modules Sets the maximum number of visible modules in output (number)
  --display-chunks Display chunks in the output (boolean)
  --display-entrypoints Display entry points in the output (boolean)
  --display-origins Display origins of chunks in the output (boolean)
  --display-cached Display also cached modules in the output (boolean)
  --display-cached-assets Display also cached assets in the output (boolean)
  --display-reasons Display reasons about module inclusion in the output (boolean)
  --display-depth Display distance from entry point for each module (boolean)
  --display-used-exports Display information about used exports in modules (boolean)
  --display-provided-exports Display information about exports provided from modules (boolean)
  --display-error-details Display details about errors (boolean)
  --verbose Show more details (boolean)

Options:
  --help, -h      Show help (boolean)
  --version, -v   Show version number (boolean)
  --json, -j      Prints the result as JSON. (boolean)

webpack 2.2.1
Usage: https://webpack.github.io/docs/cli.html
Usage without config files: webpack <entry> [<entry>] <output>
Usage with config file: webpack

Config options:
  --config Path to the config file                                [string] [default: webpack.config.js or webpackfile.js]
  --env      Environment passed to the config, when it is a function

Basic options:
  --context The root directory for resolving entry point and stats [string] [default: The current directory]
  --entry    The entry point                                       [string]
  --watch    Watch the filesystem for changes                     [boolean]
  --debug    Switch loaders to debug mode                         [boolean]
  --devtool  Enable devtool for better debugging experience (Example: --devtool eval-cheap-module-source-map) [string]
  -d         shortcut for --debug --devtool eval-cheap-module-source-map [boolean]
  -p         shortcut for --optimize-minimize --define process.env.NODE_ENV="production" [boolean]
  --progress Print compilation progress in percentage             [boolean]

Module options:
  --module-bind Bind an extension to a loader                    [string]
  --module-bind-post [string]
  --module-bind-pre [string]

Output options:
  --output-path The output path for compilation assets           [string] [default: The current directory]
  --output-filename The output filename of the bundle           [string] [default: (name).js]
  --output-chunk-filename The output filename for additional chunks [string] [default: filename with [id] instead of (name) or [id] prefixed]
  --output-source-map-filename The output filename for the SourceMap [string]
  --output-public-path The public path for the assets             [string]
  --output-jsonp-function The name of the jsonp function used for chunk loading [string]
  --output-pathinfo Include a comment with the request for every dependency (require, import, etc.) [boolean]
  --output-library Expose the exports of the entry point as library [string]
  --output-library-target The type for exposing the exports of the entry point as library [string]

Advanced options:
```

```

--records-input-path      Path to the records file (reading)      [string]
--records-output-path    Path to the records file (writing)    [string]
--records-path           Path to the records file            [string]
--define                 Define any free var in the bundle    [string]
--target                 The targeted execution environment    [string]
--cache                  Enable in memory caching            [boolean]
                        [boolean] (default: it's enabled by default when watching)
--watch-stdin, --stdin   Exit the process when stdin is closed    [boolean]
--watch-aggregate-timeout Timeout for gathering changes while watching    [string]
--watch-poll              The polling interval for watching (also enable [boolean]
                        polling)
--hot                     Enables Hot Module Replacement      [boolean]
--prefetch                Prefetch this request (Example: --prefetch [string]
                        ./file.js)
--provide                 Provide these modules as free vars in all modules [string]
                        (Example: --provide {jQuery=jquery})
--labeled-modules         Enables labeled modules              [boolean]
--plugin                  Load this plugin                   [string]
--bail                    Abort the compilation on first error [boolean]
--profile                 Profile the compilation and include information in [boolean]
                        stats

Resolving options:
--resolve-alias           Setup a module alias for resolving (Example: [string]
                        jquery-plugin=jquery.plugin)
--resolve-extensions      Setup extensions that should be used to resolve [string]
                        modules (Example: --resolve-extensions .es6.js)
--resolve-loader-alias    Setup a loader alias for resolving      [array]
                        [string]

Optimizing options:
--optimize-max-chunks    Try to keep the chunk count below a limit
--optimize-min-chunk-size Try to keep the chunk size above a limit
--optimize-minimize       Minimize javascript and switches loaders to [boolean]
                        minimizing

Stats options:
--color, --colors        Enables/Disables colors on the console
--sort-modules-by        Sorts the modules list by property in module
--sort-chunks-by         Sorts the chunks list by property in chunk [string]
--sort-assets-by         Sorts the assets list by property in asset [string]
--hide-modules            Hides info about modules              [boolean]
--display-exclude         Exclude modules in the output         [string]
--display-modules         Display even excluded modules in the output [boolean]
--display-max-modules     Sets the maximum number of visible modules in [number]
                        output
--display-chunks          Display chunks in the output          [boolean]
--display-entrypoints     Display entry points in the output     [boolean]
--display-origins         Display origins of chunks in the output [boolean]
--display-cached          Display also cached modules in the output [boolean]
--display-cached-assets   Display also cached assets in the output [boolean]
--display-reasons         Display reasons about module inclusion in the [boolean]
                        output
--display-depth           Display distance from entry point for each module [boolean]
--display-used-exports     Display information about used exports in modules [boolean]
                        (Tree Shaking)
--display-provided-exports Display information about exports provided from [boolean]
                        modules
--display-error-details   Display details about errors         [boolean]
--verbose                 Show more details                   [boolean]

Options:
--help, -h               Show help                             [boolean]
--version, -v             Show version number                 [boolean]
--json, -j                Prints the result as JSON.          [boolean]
